CROSS-LINKED SEPHAROSE is a new beaded agarose chromatographic medium with exceptional stability and extremely low non-specific adsorption. It can be used with confidence in the most extreme dissociating media including strong solutions of urea, guanidine hydrochloride and chaotropic salts. Sepharose CL can also be used in organic solvents.

You can sterilize Sepharose CL repeatedly by autoclaving at 110°C - 120°C. Cross-linked Sepharose is available in three types: Sepharose® CL-2B, CL-4B and CL-6B.

Ask for the free booklet with data and details of the new techniques, from your supplier of Sephadex®, Sepharose® and other separation media.
